MPICH

MPICH is a leading MPI implementation and a large open-source project.

Design

Idea

Let's treat each component of MPICH as a Spack package.

[2] direct dependents

Design

Idea

Let's treat each component of MPICH as a Spack package.

Figure: MPICH Dependency Graph[2]

[2] direct dependents

Design

We can easily define an “Internal PMRS Spack Repository” with each component.

[3] i.e. forked versions, cherry-picked patches, etc.

Design

We can easily define an “Internal PMRS Spack Repository” with each component.

- Direct control of MPICH dependencies[3]

[3] i.e. forked versions, cherry-picked patches, etc.

Design

We can easily define an “Internal PMRS Spack Repository” with each component.

- Direct control of MPICH dependencies[3]
- Can soft-fork upstream package definitions

[3] i.e. forked versions, cherry-picked patches, etc.

Design

We can easily define an “Internal PMRS Spack Repository” with each component.

- Direct control of MPICH dependencies[3]
- Can soft-fork upstream package definitions

Examples

```
from spack_repo.builtin.packages.ucx.package import Ucx as BuiltinUcx
from spack.package import *

class Ucx(BuiltinUcx):
        version(
                "1.19.0-embedded",
                git="https://github.com/pmodels/ucx.git",
                commit="4020d2be2271da0ac105d824f26ec76ad533577a",
        )

        @when("@1.19.0-embedded")
        def autoreconf(self, spec, prefix):
                Executable("./autogen.sh")()
```

[3] i.e. forked versions, cherry-picked patches, etc.

Design

Figure: Internal PMRS Spack Repository

Integration with Jenkins

Our matrix jobs have custom *labels* which correspond to `./configure` options.

Examples

Configuration Matrix	gnu	clang
`ch3-tcp`	✓	✓
`ch3-sock`	✓	✓
`ch4-ofi`	✓	✓

Figure: `mpich-main-osx`[4] CI Job

[4] `jenkins-pmrs.cels.anl.gov/job/mpich-main-osx`

Integration with Jenkins

Our matrix jobs have custom *labels* which correspond to `./configure` options.

Examples

Configuration Matrix	gnu	clang
`ch3-tcp`	✓	✓
`ch3-sock`	✓	✓
`ch4-ofi`	✓	✓

Figure: `mpich-main-osx`[4] CI Job

How do we translate these to `spack install`s?

[4] `jenkins-pmrs.cels.anl.gov/job/mpich-main-osx`

Integration with Jenkins

Figure: Spec Syntax[5]

Idea

Let's generate equivalent Spack specs!

[5] spack.readthedocs.io/en/latest/spec_syntax.html

Integration with Jenkins

Figure: Spec Syntax[5]

Idea

Let's generate equivalent Spack specs!

- Reuse Label $\mapsto$ `./configure` option mappings

[5] `spack.readthedocs.io/en/latest/spec_syntax.html`

Integration with Jenkins

Figure: Spec Syntax[5]

Idea

Let's generate equivalent Spack specs!

- Reuse Label $\mapsto$ `./configure` option mappings
- Variants provide configuration granularity

[5] `spack.readthedocs.io/en/latest/spec_syntax.html`

Integration with Jenkins

Figure: Spec Syntax[5]

Idea

Let's generate equivalent Spack specs!

- Reuse Label $\mapsto$ `./configure` option mappings
- Variants provide configuration granularity
- Dependencies can be explicitly resolved

[5] `spack.readthedocs.io/en/latest/spec_syntax.html`

Integration with Jenkins

Examples

```
config_opt=' --with-device=ch4:ofi --without-xpmem
--with-wrapper-dl-type=rpath --with-hwloc=embedded
--with-libfabric=embedded'
```

[6] and for us maintainers

Integration with Jenkins

Examples

```
config_opt=' --with-device=ch4:ofi --without-xpmem
--with-wrapper-dl-type=rpath --with-hwloc=embedded
--with-libfabric=embedded'
```

$$\Downarrow$$

```
mpich@develop device=ch4 netmod=ofi ~xpmem
wrapper-dl-type=rpath +hwloc %hwloc@2.9.0-embedded
%libfabric@1.20.1-embedded
```

[6] and for us maintainers

Integration with Jenkins

Examples

```
config_opt=' --with-device=ch4:ofi --without-xpmem
--with-wrapper-dl-type=rpath --with-hwloc=embedded
--with-libfabric=embedded'
```

$$\Downarrow$$

```
mpich@develop device=ch4 netmod=ofi ~xpmem
wrapper-dl-type=rpath +hwloc %hwloc@2.9.0-embedded
%libfabric@1.20.1-embedded
```

Idea++

We can generalize this to a tool which templates Spack specs/environments for our CI[6] to concretize and install.

[6] and for us maintainers

PR Jobs

We can also utilize `spack develop` and `@<sha-1>` Git versions to validate contributed PRs *while utilizing Spack*!

[7] `jenkins-pmrs.cels.anl.gov/job/mpich-review-ch4-ofi-spack`

[8] `jenkins-pmrs.cels.anl.gov/job/mpich-review-ch4-ucx-spack`

PR Jobs

We can also utilize `spack develop` and `@<sha-1>` Git versions to validate contributed PRs *while utilizing Spack*!

Examples

Figure: Example PR Utilizing Spackified CI Jobs[7,8]

[7] `jenkins-pmrs.cels.anl.gov/job/mpich-review-ch4-ofi-spack`

[8] `jenkins-pmrs.cels.anl.gov/job/mpich-review-ch4-ucx-spack`

Concurrent Jobs

An interesting consequence of integrating Spack into our existing CI infrastructure is that per-job `spack install`s run in parallel.

Concurrent Jobs

Examples

Bug!

We ran into a race condition with Spack's installer...

Concurrent Jobs

bugfix: don't stop early when other spacks are installing #51539

Merged haampie merged 1 commit into `develop` from `bugfix-early-stop-on-multi-node-install` on Nov 10, 2025

Conversation 4 | Commits 1 | Checks 30 | Files changed 1

tgamblin commented on Nov 8, 2025 • edited — Member

Fixes #50933.

The installer in #47590 missed a loop condition and wasn't properly waiting on tasks requeued as `BuildStatus.INSTALLING`. This means another Spack is working on that task, and we should wait and not bail early.

There is also a condition in the installer where we disocver for the first time that a package is installed in cleanup. We need to update the installed dependencies lists of dependents when that happens.

Figure: `github.com/spack/spack/pull/51539`
